

REDUNDANCY MODULE

- For N+1 and 1+1 Redundant Systems
- Dual Input with Single Output
- Minimal Losses - Mosfets Instead of Diodes
- Only 50mV Voltage Drop at 40A Output Current
- Only 2.7W Loss at 40A and 8.3W at 80A Output Current
- 160% (130A) Peak Load Capability
- Reverse Polarity Protected Input
- Full Power Between -40°C and +70°C
- Width only 46mm
- Rugged Metal Housing
- Easy Wiring:
Distribution Terminal for Negative Pole Included
- 3 Year Warranty

GENERAL DESCRIPTION

The YR80.241 is a redundancy module, which can be used to build 1+1 and N+1 redundant systems. It is equipped with two input channels which can be connected to 40A power supplies and one output which can carry nominal currents up to 80A.

The novelty of this redundancy module is the utilization of mosfets instead of diodes for the decoupling of the two input channels. This reduces the heat generation and the voltage drop between input and output. The redundancy module does not require an additional auxiliary voltage and is self-sufficient even in case of a short circuit across the output.

Due to the low power losses, the unit is very slender and only requires 46mm width on the DIN-rail. Large connection terminals allow for a safe and fast installation with a large international approval package. This unit is suitable for nearly every application.

SHORT-FORM DATA

| | | |
|------------------------------|---|--|
| Input voltage | DC 24-28V | $\pm 30\%$ |
| Input voltage range | 16.8–36.4Vdc | |
| Input current | 2x 0–40A 2x 40–65A | continuous for 5 seconds |
| Output current | 0–80A 80–130A 130A | continuous for 5 seconds at cont. overload/ short circuit |
| Input to output voltage drop | typ. 50mV typ. 85mV typ. 95mV | input: 2x20A input: 1x40A input: 2x40A |
| Power losses | typ. 700mW typ. 2.7W typ. 3.6W typ. 8.3W | at no load input: 2x20A input: 1x40A input: 2x40A |
| Temperature range | -40°C to +70°C | operational, no de-rating req. |
| Dimensions | 46x124x127mm*) | WxHxD |

*) plus 6mm in depth for the screw terminal

The information presented in this document is believed to be accurate and reliable and may change without notice.
No part of this document may be reproduced or utilized in any form without permission in writing from the publisher.

TERMINOLOGY AND ABBREVIATIONS

| | |
|---|---|
| PE and \ominus symbol | PE is the abbreviation for Protective Earth and has the same meaning as the symbol \ominus . |
| Earth, Ground | This document uses the term "earth" which is the same as the U.S. term "ground". |
| T.b.d. | To be defined, value or description will follow later. |
| DC 24V | A figure displayed with the AC or DC before the value represents a nominal voltage with standard tolerances (usually $\pm 15\%$) included. E.g.: DC 12V describes a 12V battery disregarding whether it is full (13.7V) or flat (10V) |
| 24Vdc | A figure with the unit (Vdc) at the end is a momentary figure without any additional tolerances included. |
| may | A key word indicating flexibility of choice with no implied preference |
| shall | A key word indicating a mandatory requirement |
| should | A key word indicating flexibility of choice with a strongly preferred implementation |
| 1+1 Redundancy | Use of two identical power supplies in parallel to provide continued operation following most failures in a single power supply. The two power supply outputs should be isolated each other by utilizing diodes or other switching arrangements. E.g. two 10A power supplies are needed to achieve a 10A redundant system. |
| N+1 Redundancy | Use of three or more identical power supplies in parallel to provide continued operation following most failures in a single power supply. All power supply outputs should be isolated each other by utilizing diodes or other switching arrangements. E.g.: To achieve a 40A redundant system, five 10A power supplies are needed in a N+1 redundant system. |

1. INTENDED USE

This device is designed for installation in an enclosure (according to the requirements of the end-standard) and is intended for the general use such as in industrial control, office, communication, and instrumentation equipment. Do not use this power supply in aircraft, trains and nuclear equipment where malfunction may cause severe personal injury or threaten human life.

2. INSTALLATION REQUIREMENTS

This device may only be installed and put into operation by qualified personnel.

This device does not contain serviceable parts.

If damage or malfunction should occur during installation or operation, immediately turn power off and send unit to the factory for inspection.

Mount the unit on a DIN-rail so that the output terminals are located on the top and the input terminals on the bottom of the unit. For other mounting orientations see de-rating requirements of chapter 19.6. in this document.

This device is designed for convection cooling and does not require an external fan. Do not obstruct airflow and do not cover the ventilation grid (e.g. cable conduits) by more than 30%!

Keep the following installation clearances:

40mm on top,

20mm on the bottom,

5mm on the left and right sides are recommended when the device is loaded permanently with more than 50% of the rated output current. Increase the side clearance to 15mm in case the adjacent device is a heat source (e.g. another power supply).

See also chapter 19.3 for further information in combination with QS40 and QT40 power supplies from the PULS DIMENSION series.

WARNING Risk of electrical shock, fire, personal injury or death.

- Turn power off before working on the device. Protect against inadvertent re-powering.
- Make sure that the wiring is correct by following all local and national codes.
- Do not open, modify or repair the unit.
- Use caution to prevent any foreign objects from entering the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on, and immediately after power-off. Hot surfaces may cause burns.

3. INPUT AND OUTPUT CHARACTERISTICS

| | | | |
|-------------------------------|------|--------------|--|
| Number of inputs | - | 2 | |
| Number of outputs | - | 1 | |
| Input voltage | nom. | DC 24-28V | ±30% The input circuitry must meet the SELV requirements stipulated by IEC/EN/UL 60950-1. |
| Input voltage range | - | 16.8-36.4Vdc | |
| Voltage drop, input to output | typ. | 95mV | at 2x40A, see Fig. 3-1 |
| | typ. | 49mV | at 2x20A, see Fig. 3-1 |
| | typ. | 81mV | at 1x40A, see Fig. 3-2 |
| Input current | nom. | 2x 0-40A | continuous |
| | nom. | 2x 40-65A | for 5 seconds |
| | max | 2x 65A | at continuous overload or short circuit |
| Peak input current | max. | 1500A | for max. 1ms per input |
| Output current | nom. | 80A | continuous |
| | nom. | 80-130A | for 5 seconds |
| | max. | 130A | at continuous overload or short circuit |
| Reverse current | max. | 1mA | at 24V, per input, -40°C to +70°C |
| Reverse voltage | max. | 40Vdc | voltage applied to the output, continuously allowed |
| Output capacitance | typ. | 320µF | |

Note: Ensure that the continuous output current does not exceed 130A. Check the short-circuit current of the power sources and if the power source can deliver more than 130A together, use an appropriate fuse on the output.

Fig. 3-1 Input to output voltage drop when both inputs draw current

(typical 1+1 redundant case, when the output voltages of the two units are equal or set into "parallel use" mode)

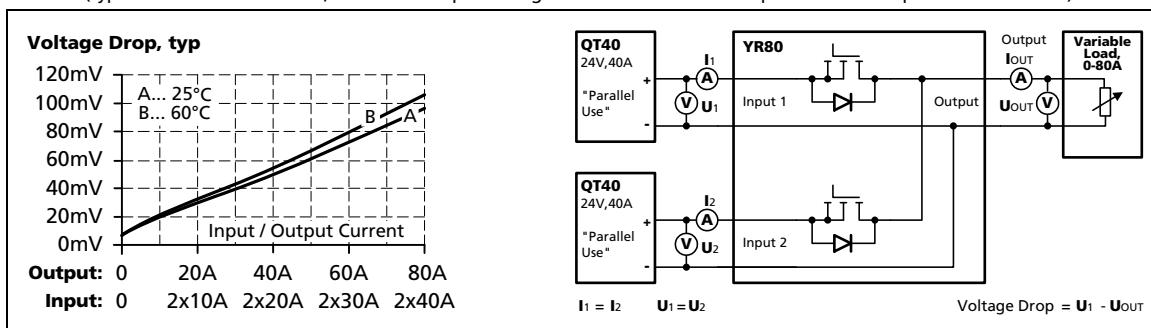

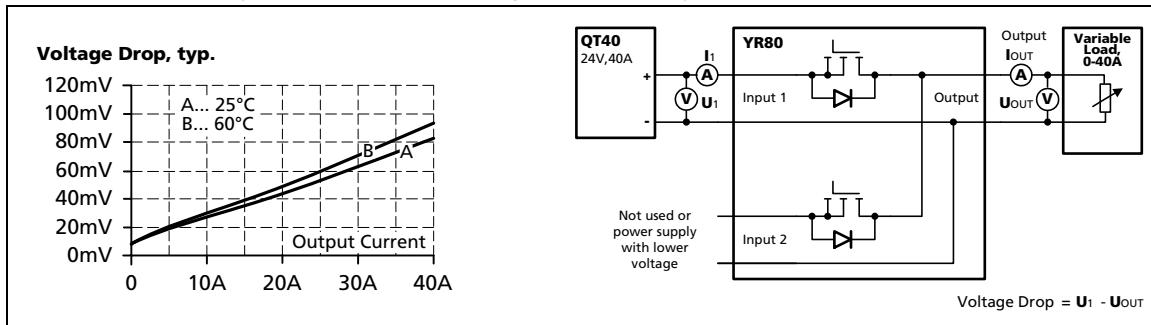

Fig. 3-2 Input to output voltage drop when only one input draws current

4. POWER LOSSES

DC 24V

| | | | |
|----------------------|------|-------|---|
| Power losses | typ. | 2.7W | input: 2x20A |
| | typ. | 8.3W | input: 2x40A |
| | typ. | 3.6W | input: 1x40A, (only one input is connected to input voltage) |
| Standby power losses | typ. | 0.35W | at no output current, (only one input is connected to input voltage) |
| | typ. | 0.7W | at no output current, (both inputs are connected to input voltages) |

Fig. 4-1 Power losses when both inputs draw equal current
(typical n+1 or 1+1 redundant case, when the power supplies are set into "parallel use" mode)

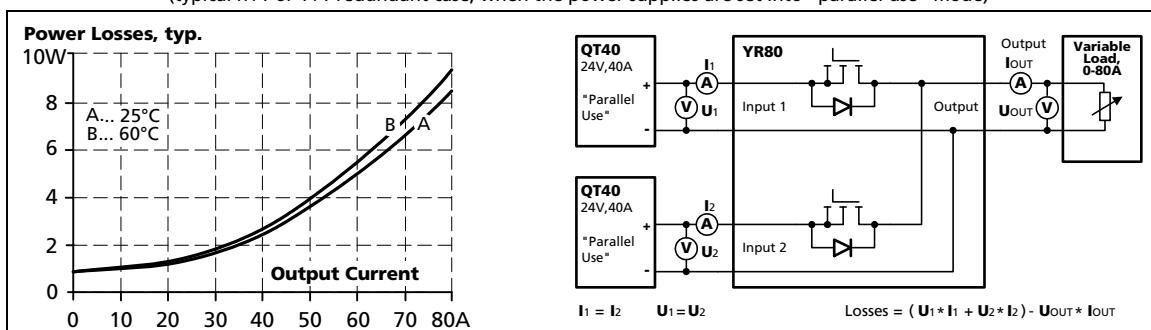

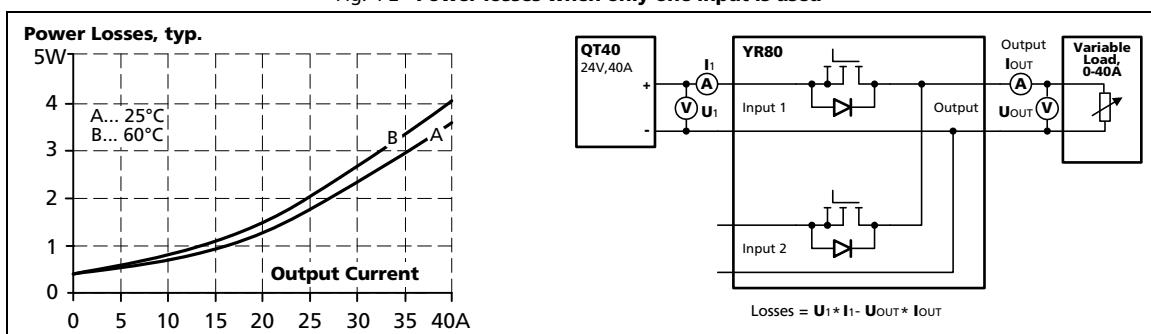

Fig. 4-2 Power losses when only one input is used

Note: As soon as voltage is applied on input 2, an additional 0.35W will be consumed. It is not relevant, whether this channel contributes to the output current or not.

5. RELIABILITY

| Input / output current conditions | Input: 2x20A Output: 40A | Input: 2x40A Output: 80A | Input: 1x40A Output: 40A |
|-----------------------------------|-----------------------------|-----------------------------|--|
| Lifetime expectancy *) | T.B.D. T.B.D. T.B.D. | T.B.D. T.B.D. T.B.D. | at 24V and 40°C at 24V and 40°C at 24V and 25°C |
| MTBF **) SN 29500, IEC 61709 | T.B.D. T.B.D. | T.B.D. T.B.D. | T.B.D. at 24V 40°C at 24V 25°C |
| MTBF **) MIL HDBK 217F | T.B.D. T.B.D. | T.B.D. T.B.D. | Ground Benign GB40 (24Vand 40°C) Ground Benign GB25 (24Vand 25°C) |

- *) The **Lifetime expectancy** shown in the table indicates the minimum operating hours (service life) and is determined by the lifetime expectancy of the built-in electrolytic capacitors. Lifetime expectancy is specified in operational hours and is calculated according to the capacitor's manufacturer specification. The manufacturer of the electrolytic capacitors only guarantees a maximum life of up to 15 years (131 400h). Any number exceeding this value is a calculated theoretical lifetime which can be used to compare devices.
- **) **MTBF** stands for **Mean Time Between Failure**, which is calculated according to statistical device failures, and indicates reliability of a device. It is the statistical representation of the likelihood of a unit to fail and does not necessarily represent the life of a product.

6. TERMINALS AND WIRING

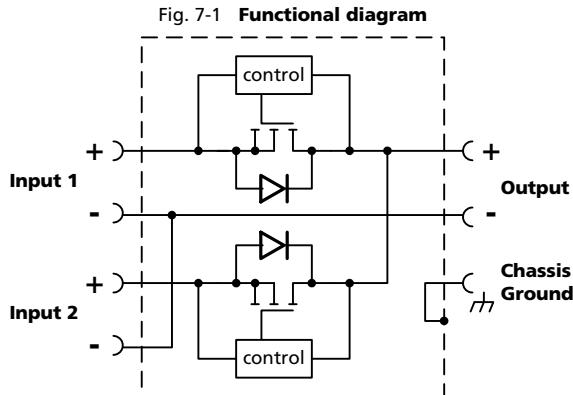

| | Input | Output |
|-------------------------------|---------------------------------|-------------------------------|
| Type | screw termination | screw termination |
| Solid wire | 0.5-16mm ² | 0.5-35mm ² |
| Stranded wire | 0.5-10mm ² | 0.5-35mm ² |
| American Wire Gauge | 22-8 AWG | 20-2 AWG |
| Wire stripping length | 12mm / 0.5inch | 18mm / 0.7inch |
| Screwdriver | 3.5mm slotted or Pozidrive No 2 | 5mm slotted or Pozidrive No 2 |
| Recommended tightening torque | 1.2Nm, 10.6lb.in | 2.5Nm, 22lb.in |

To connect the chassis, use a ring-type terminal (ring cable lug) which is suitable for a M4 screw and connect it to the chassis ground terminal on top of the unit.

Instructions:

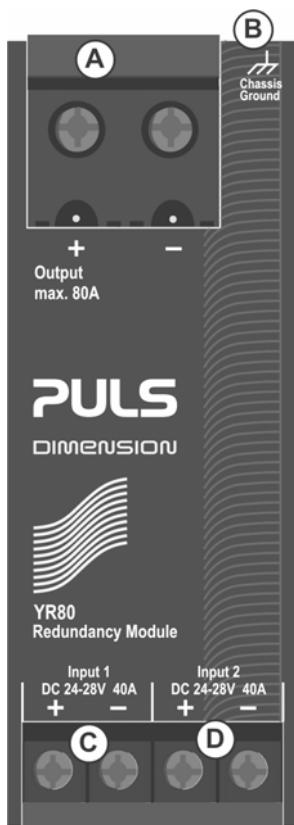

- The external circuitry of all terminals must meet the safety requirements stipulated by IEC/EN/UL 60950-1: SELV.
- Use appropriate copper cables that are designed for minimum operating temperatures of:
 60°C for ambient up to 45°C and
 75°C for ambient up to 60°C and
 90°C for ambient up to 70°C minimum.
- Follow national installation codes and installation regulations!
- Ensure that all strands of a stranded wire enter the terminal connection!
- Up to two stranded wires with the same cross section are permitted in one connection point.
- Screws of unused terminal compartments should be securely tightened.
- Ferrules are allowed, but not required.
- Do not connect or disconnect the wires from the terminals below -25°C (-13°F).

7. FUNCTIONAL DIAGRAM

Fig. 8-1 Front side

A Output Terminals (screw terminals)

B Chassis Ground Terminals

To be connected on the top side of the housing with a ring-type terminal (ring cable lug) which is suitable for a M4 screw.

Connection of the chassis is optional and not required since the unit fulfills the requirements according to protection class III.

C Input Terminals for Input 1 (screw terminals)

D Input Terminals for Input 2 (screw terminals)

9. EMC

The redundancy module YR80.241 is suitable for applications in industrial environment as well as in residential, commercial and light industry environment without any restrictions (e.g. cable length). The CE mark indicates conformance with EMC directive 2004/108/EC and the low-voltage directive (LVD) 2006/95/EC. A detailed EMC report is available on request.

| EMC Immunity | According generic standards: EN 61000-6-1 and EN 61000-6-2 | | | |
|-----------------------------------|--|------------------------------------|-------------|----------------------------|
| Electrostatic discharge | EN 61000-4-2 | Contact discharge Air discharge | 8kV 15kV | Criterion A Criterion A |
| Electromagnetic RF field | EN 61000-4-3 | 80MHz-2.7GHz | 10V/m | Criterion A |
| Fast transients (Burst) | EN 61000-4-4 | Input lines Output lines | 2kV 2kV | Criterion A Criterion A |
| Surge voltage on input lines | EN 61000-4-5 | + → - +/- → Chassis ground | 500V 1kV | Criterion A Criterion A |
| Surge voltage on output lines | EN 61000-4-5 | + → - +/- → Chassis ground | 500V 1kV | Criterion A Criterion A |
| Conducted disturbance | EN 61000-4-6 | 0.15-80MHz | 10V | Criterion A |
| Power-frequency magnetic field *) | EN 61000-4-8 | 50Hz | 30A/m | Criterion A |

Criteria:

A: Redundancy module shows normal operation behavior within the defined limits.

Notes:

*) A test is not applicable according to EN 61000-6-2, since the device does not contain components susceptible to magnetic fields, e.g. hall elements, electrodynamic microphones, etc.

| EMC Emission | According generic standards: EN 61000-6-3 and EN 61000-6-4 | |
|---------------------|--|---|
| Conducted emission | IEC/CISPR 16-1-2, IEC/CISPR 16-2-1 IEC/CISPR 16-1-2, IEC/CISPR 16-2-1 | Class B, input lines *) Class B, output lines *) |
| Radiated emission | EN 55011, EN 55022 | Class B |

This device complies with FCC Part 15 rules.

Operation is subjected to following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

*) Provided, that power sources connected on the inputs fulfill the class B requirements too.

| | |
|----------------------------|--|
| Switching frequency | The internal auxiliary supply is generated with a boost converter. The switching frequency is typ. 16kHz. |
|----------------------------|--|

10. ENVIRONMENT

| | | |
|----------------------------|--|---|
| Operational temperature *) | -40°C to +70°C (-40°F to 158°F) | |
| Storage temperature | -40 to +85°C (-40°F to 185°F) | for storage and transportation |
| Humidity **) | 5 to 95% r.H. | IEC 60068-2-30 |
| Vibration sinusoidal | 2-17.8Hz: ±1.6mm; 17.8-500Hz: 1g 2 hours / axis | IEC 60068-2-6 |
| Shock | 30g 6ms, 20g 11ms 3 bumps / direction, 18 bumps in total | IEC 60068-2-27 |
| Altitude | 0 to 2000m (0 to 6 560ft) 2000 to 6000m (6 560 to 20 000ft) | without any restrictions reduce output power or ambient temperature, see Fig. 10-2 |
| Altitude de-rating | 5A/1000m or 5°C/1000m | > 2000m (6500ft), see Fig. 10-2 |
| Over-voltage category | not applicable | The concept of the overvoltage category is used for equipment energized directly from the low voltage mains (IEC 60664-1 §4.3.3.2.1). |
| Degree of pollution | 2 | IEC 62103, EN 50178, not conductive |

*) Operational temperature is the same as the ambient temperature and is defined as the air temperature 2cm below the unit.

**) Do not energize while condensation is present

Fig. 10-1 Output current vs. ambient temp.

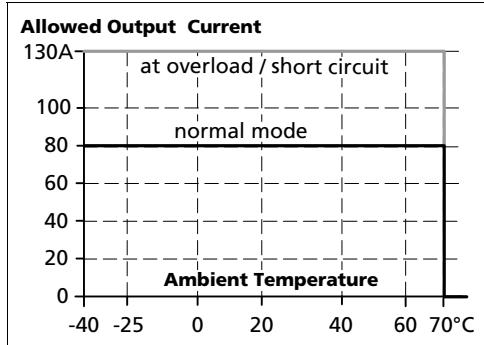

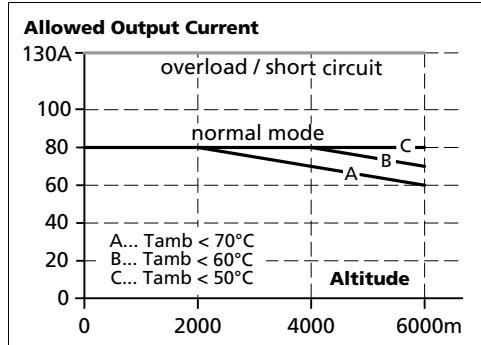

Fig. 10-2 Output current vs. altitude

11. PROTECTION FEATURES

| | | |
|-----------------------------------|--------------|--|
| Output over-current protection | not included | |
| Reverse input polarity protection | included | unit does not start when input voltage is reversed |
| Degree of protection | IP 20 | EN/IEC 60529 |
| Penetration protection | > 3.6mm | e.g. screws, small parts |
| Over-temperature protection | not included | |
| Input transient protection | not included | |
| Output transient protection | included | see EMC section |
| Internal input fuse | not included | |

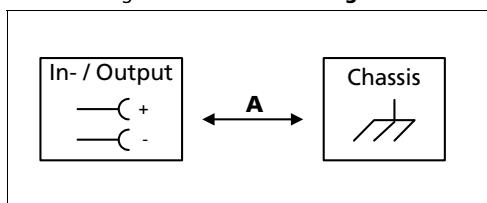

12. SAFETY FEATURES

| | | |
|---------------------------|------------------------|--|
| Input / output separation | no galvanic separation | Mosfet between input and output |
| Class of protection | III | PE (Protective Earth) or chassis connection not required |
| PE resistance | < 0.1Ohm | between housing and chassis-ground terminal |

13. DIELECTRIC STRENGTH

The input and output voltages have the same reference, are floating and have no ohmic connection to ground. Type and factory tests are conducted by the manufacturer. Field tests may be conducted in the field using the appropriate test equipment which applies the voltage with a slow ramp (2s up and 2s down). Connect input/output terminals together before conducting the test. When testing, set the cut-off current settings to the value in the table below.

Fig. 13-1 Dielectric strength

| | A |
|-------------------------|-------|
| Type test | 60s |
| Factory test | 5s |
| Field test | 5s |
| Cut-off current setting | > 2mA |

14. APPROVALS

| | | |
|---|--|--|
| EC Declaration of Conformity | | The CE mark indicates conformance with EMC directive 2004/108/EC and the low-voltage directive (LVD) 2006/95/EC. |
| IEC 60950-1 | | CB Scheme, Information Technology Equipment |
| UL 508 | | Listed for use as Industrial Control Equipment; U.S.A. (UL 508) and Canada (C22.2 No. 107-1-01); E-File: E198865 |
| UL 60950-1 | | Recognized for use as Information Technology Equipment, Level 5; U.S.A. (UL 60950-1) and Canada (C22.2 No. 60950); E-File: E137006 |
| ANSI / ISA 12.12.01-2007 (Class I Div 2), pending | | LISTED for use in Hazardous Location Class I Div 2 Tx Groups A,B,C,D systems; U.S.A. (ANSI / ISA 12.12.01-2007) and Canada (C22.2 No. 213-M1987) The unit is suitable for use in Class I Division 2 Groups A, B, C, D locations. Substitution of components may impair suitability for Class I Division 2 environment. Do not disconnect equipment unless power has been switched off. Wiring must be in accordance with Class I, Division 2 wiring methods of the National Electrical Code, NFPA 70, and in accordance with other local or national codes. |
| EN 60079-15 ATEX pending | | Suitable for use in Class 1 Zone 2 Groups IIa, IIb and IIc locations. Number of ATEX certificate: EPS 09 ATEX 1 236 The power supply must be built-in in an IP54 enclosure. |
| Marine, pending | | GL (Germanischer Lloyd) classified and ABS (American Bureau for Shipping) PDA Environmental category: C, EMC2 Marine and offshore applications |
| GOST P, pending | | Certificate of Conformity for Russia and other GUS countries |

15. FULFILLED STANDARDS

| | |
|---------------------|---|
| EN/IEC 60204-1 | Safety of Electrical Equipment of Machines |
| EN/IEC 61131-2 | Programmable Controllers |
| EN 50178, IEC 62103 | Electronic Equipment in Power Installations |

16. USED SUBSTANCES

The unit does not release any silicone and is suitable for use in paint shops.

The unit conforms to the RoHS directive 2002/96/EC

Electrolytic capacitors included in this unit do not use electrolytes such as Quaternary Ammonium Salt Systems.

Plastic housings and other molded plastic materials are free of halogens, wires and cables are not PVC insulated.

The production material within our production does not include following toxic chemicals:

Polychlorized Biphenyl (PCB), Polychlorized Terphenyl (PCT), Pentachlorophenol (PCP), Polychlorinated naphthalene (PCN), Polybrom Biphenyl (PBB), Polybrom Bipheny-oxyd (PBO), polybrominated Diphenylether (PBDE), Polychlorinated

17. PHYSICAL DIMENSIONS AND WEIGHT

| | |
|-------------------------|--|
| Weight | 440g / 0.97lb |
| DIN-Rail | Use 35mm DIN-rails according to EN 60715 or EN 50022 with a height of 7.5 or 15mm. The DIN-rail height must be added to the unit depth (127mm) to calculate the total required installation depth. |
| Installation clearances | See chapter 2 |

Fig. 17-1 Front view

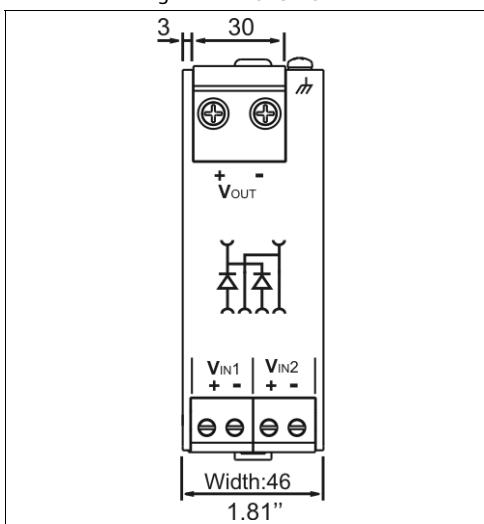

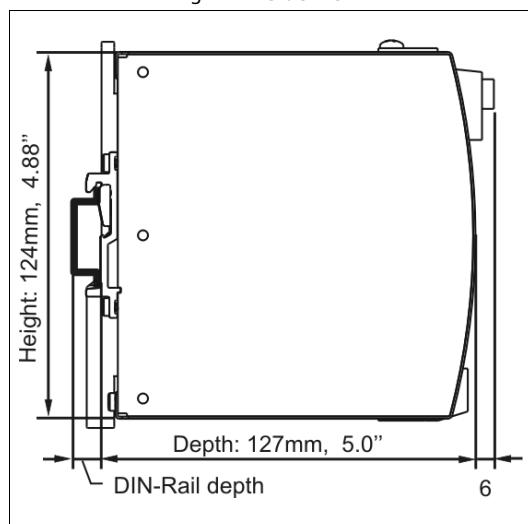

Fig. 17-2 Side view

18. ACCESSORIES

ZM2.WALL Wall mounting bracket

This bracket is used to mount the YR80 redundancy module onto a flat surface without utilizing a DIN-Rail.

Fig. 18-1 ZM2.WALL Wall mounting bracket

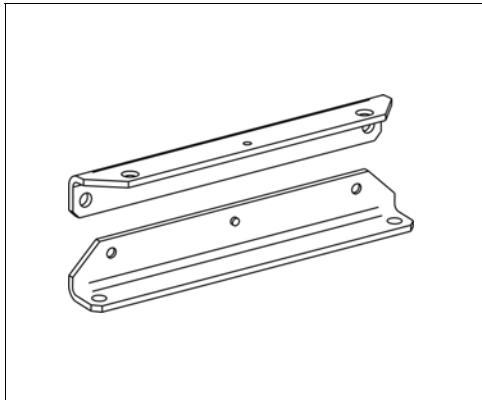

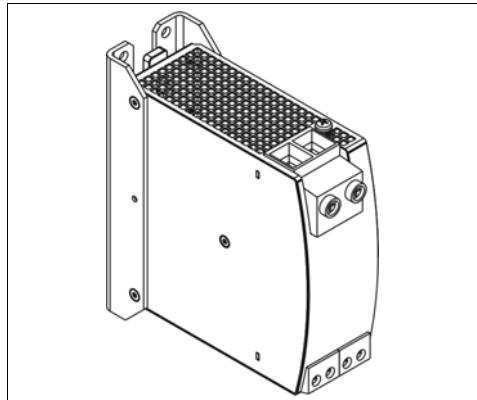

Fig. 18-2 Assembled wall mounting bracket

ZM12.SIDE Side mounting bracket

This bracket is used to mount the YR80 redundancy module sideways with or without utilizing a DIN-Rail.

The two aluminum brackets and the black plastic slider of the unit have to be detached, so that the steel brackets can be mounted.

For sideway DIN-rail mounting, the removed aluminum brackets and the black plastic slider need to be mounted on the steel bracket.

Fig. 18-3

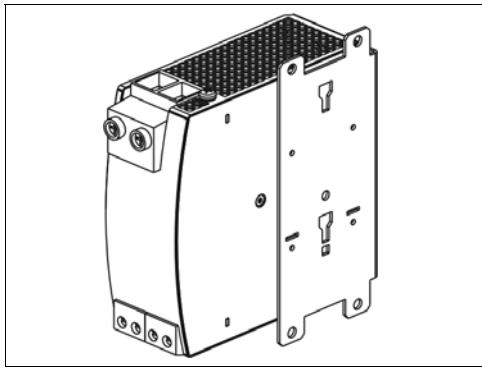

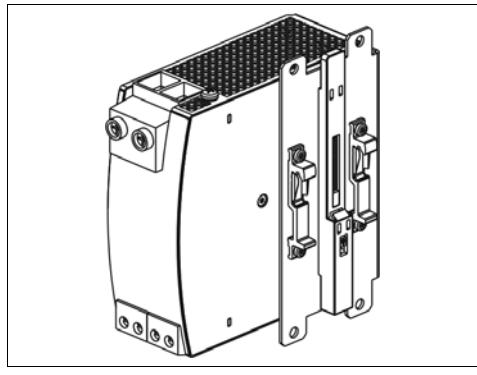

Fig. 18-4
Side mounting with DIN-rail brackets

19. APPLICATION NOTES

19.1. RECOMMENDATIONS FOR REDUNDANCY

Recommendations for the configuration of redundant power systems:

- Use separate input fuses for each power supply.
- Use three-phase power supplies to gain functional safety if one phase fails.
- When single-phase power supplies are utilized connect them to different phases or mains circuits if possible.
- Set the power supply in "Parallel-Use" mode if this feature is available
- It is desirable to set the output voltages of all power supplies to the same value.

19.2. INDUCTIVE AND CAPACITIVE LOADS

The unit is designed to supply any kind of loads, including unlimited capacitive and inductive loads.

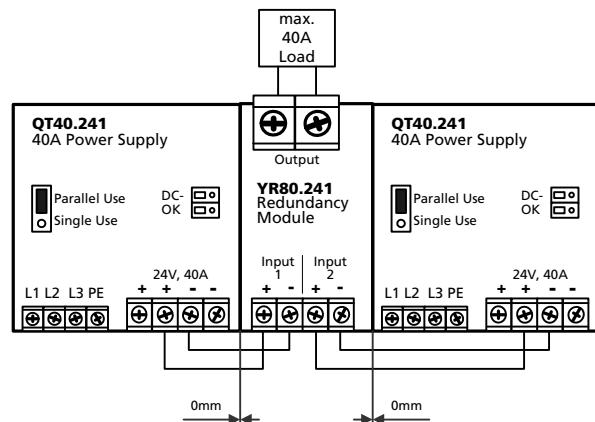

19.3. SIDEWARDS INSTALLATION CLEARANCES

The minimum clearance recommendations are defined in chapter 2.

Normally, the following installation clearance are recommended: 40mm on top, 20mm on the bottom, 5mm on the left and right sides when the device is loaded permanently with more than 50% of the rated power. Increase this clearance to 15mm in case the adjacent device is a heat source (e.g. another power supply).

The clearance between the power supplies and the redundancy module can be reduced to zero under the following conditions:

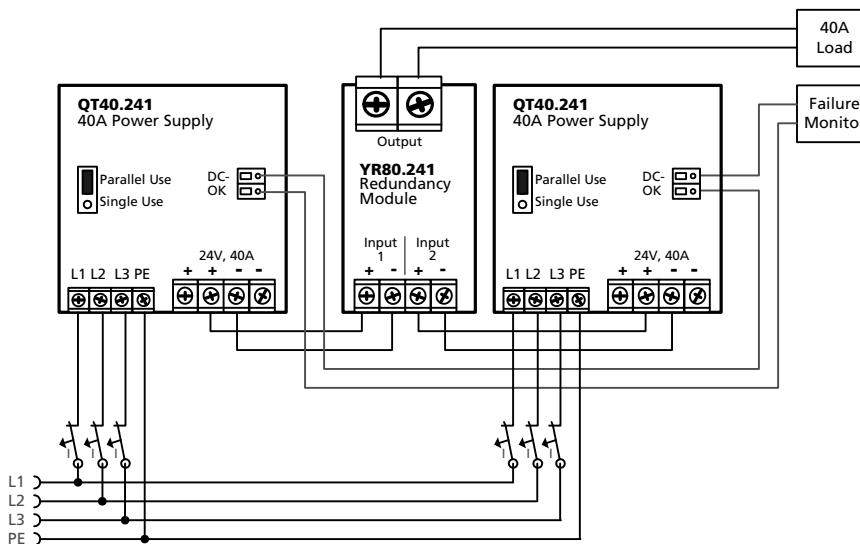

- 1+1 redundancy application with maximum 40A output current.
- The redundancy module is placed between the two power supplies.
- The power supplies are set into "Parallel Use" mode

19.4. 1+1 REDUNDANCY UP TO 40A

1+1 Redundancy up to 40A requires two 40A power supplies and one YR80.241 redundancy module.

Fig. 19-1 **Wiring diagram, 1+1 Redundancy, 40A output current**

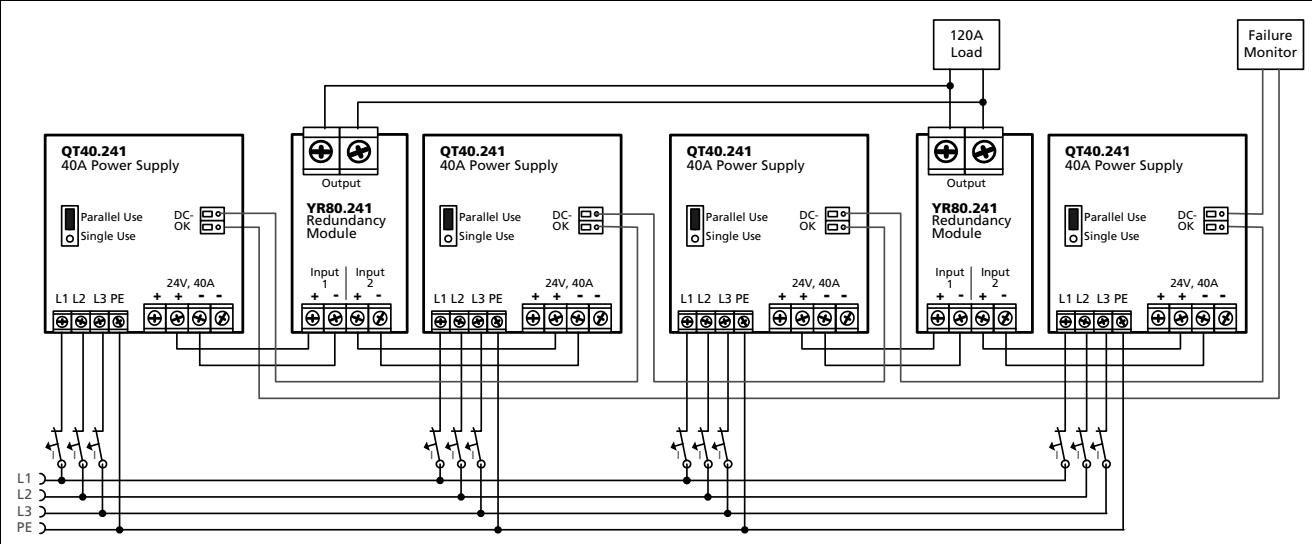

Note: Use separate mains systems for each power supply whenever it is possible

19.5. N+1 REDUNDANCY, EXAMPLE WITH 120A

n+1 Redundancy up to 120A requires four 40A power supplies and two YR80.241 redundancy module.

Fig. 19-2 **Wiring diagram, n+1 Redundancy, 120A output current**

Note: Use separate mains systems for each power supply whenever it is possible

19.6. MOUNTING ORIENTATIONS

Mounting orientations other than input terminals on the bottom and output on the top require a reduction in continuous output power or a limitation in the maximum allowed ambient temperature. The amount of reduction influences the lifetime expectancy of the power supply. Therefore, two different derating curves for continuous operation can be found below:

Curve A1 Recommended output current.

Curve A2 Max allowed output current (results in approximately half the lifetime expectancy of A1).
